DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/13/2005 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1 are rejected under 35 U.S.C. 102(b) as being anticipated by Mihara (US 6,558,003.)

Mihara teaches in figure 1 a projection display device, comprising:

A casing (1 and 16) having an air inlet (9 and 10) and an air outlet (18);

A lamp (2) installed in said casing;

An optical engine (4-6), installed in said casing; and

Art Unit: 2851

A lamp cooling apparatus, installed in said casing, the lamp cooling apparatus comprising a fan (11) and a recess (17) formed on a bottom of the casing, said fan being installed between said lamp and said recess, said fan being not inside said recess, said air inlet (10) being not directly below said recess.

With regards to applicant's claim 3:

10 and 18 are clearly on opposite sides of the casing.

With regards to applicant's claim 4:

The reflector pointed at by the unlabeled arrow can be considered a cover, there is enough space that at least some convection would occur between the lamp (2) and said cover.

With regards to applicant's claim 5:

Air inlet 10 is disposed at the front side of the lamp while air outlet 18 is disposed towards the back of the lamp, since top and bottom are relative terms these inlets and outlets meet applicant's claim limitations.

With regards to applicant's claim 6:

Fan 8 is installed at the air inlet.

With regards to applicant's claim 7:

Art Unit: 2851

Several parts are shown that can be considered diversion plates; the grating at 12 a the baffles near the screws (20) and other parts.

With regards to applicant's claim 13:

Mihara teaches in figure 1 a projection display device, comprising:

A casing (1 and 16) having an air inlet (10) and an air outlet (18), said air inlet and said air outlet being respectively disposed on sides of said casing (front and back sides);

A lamp (2);

An optical engine (4-6), installed in said casing; and

A lamp cooling apparatus (system of fans and inlet and outlets), installed in said casing, comprising a fan (11); wherein said air inlet (10) is not disposed directly above or below said fan. (Although fan 8 is disposed directly above the air inlet, fan 11 is not, which meets applicant's claim language of a projection display device comprising: and air inlet not disposed directly above or below a fan.)

Response to Arguments

4. Applicant's arguments with respect to claim 1, 3-7, and 13 have been considered but are moot in view of the new ground(s) of rejection.
